Trauma Network Peer Review 2021

Introduction of the inpatient nursing and AHP competencies

North East London and Essex Trauma Network

- Royal Free
- UCLH
- BHRUT
- Southend
- Basildon
- Homerton
- Newham
- Whipps X
- NMUH
- Barnet
- Whittington
- Royal London MTC

What is Peer Review?

- MTC Network Peer Review is carried out by QSIS
- Trauma Unit Peer review was devolved to the Networks in 2016
- Process of examining internal processes and ensuring that certain standards are met and maintained
- Supportive process
- Continuous cycle
- Previous focus on ED
- Shifting to inpatient services

New indicator

On wards that care for trauma patients there should be a nurse and/or AHP available 24/7 who has successfully attained or is working toward the Adult Competency & Educational Standard of level 1 as described in the National Major Trauma Nursing Group Guidance

http://nebula.wsimg.com/41ae5f506b6f1b8e6e25d0c722aa87 1e?AccessKeyId=3902D5FF5C6A88146946&disposition=0&allo worigin=1

Step 1 – Identify your wards

	Admitting ward	Admitting ward	Admitting ward
Musculoskeletal injuries			
Thoracic injuries			
Spinal injuries			
Traumatic Brain Injury			
Abdominal Trauma			
Max Fax and ocular trauma			
Non-invasive ventilation			
Tracheostomy			

Step 1 – Identify your wards

	Admitting ward	Admitting ward		Admitting ward			
Musculoskeletal injuries							
Thoracic injuries							
Spinal injuries							
Traumatic Brain Injury							
Abdominal Trauma			Admitting	ward	Admitting v	vard	Admitting ward
Max Fax and ocular trauma			Aumitting	waru	Admitting v	varu	Autilituing Waru
20.00	Musculoskeletal injuries		East ward				
Non-invasive ventilation	Thoracic injuries		East ward		West ward		
Tracheostomy							
	Spinal injuries		South war	d	East ward		North ward
	Traumatic Brain Injury		South war	d			
	Abdenied Torons	N1 =t. - NA/ =	-d	\A(==+=			
	Abdominal Trauma		North War	a	West ward		
	Max Fax and ocular traum	a	North War	⁻ d			
	Non-invasive ventilation		East ward		North ward		
	Tracheostomy		East ward				

There are 13 compulsory modules for all wards who accept trauma patients for each nurse to undertake.

- Organisational aspects
- · Airway and Breathing
- Circulation Management
- Haemorrhage Management
- Disability
- Exposure and Temperature control
- Pain assessment and management
- The pregnant Trauma patient
- The bariatric trauma patient
- · Challenging behaviour in the trauma patient
- Wound care
- Psychological impact of trauma
- The older (elderly) trauma patient (with the exception of paediatric or adolescent wards)

There are a further 8 modules that should be completed according to the local ward admitting schedule.

- Management of traumatic brain injury
- Management of maxillofacial, cranial and ocular trauma
- Thoracic injury and management
- Spinal column and spinal cord injury
- Abdominal trauma
- Musculoskeletal injuries
- Non-invasive ventilation
- Tracheostomy care

- Modules should be picked up according to the patients that are admitted to local area.
- It is not necessary to complete modules that the admitting team will never see (have been specifically excluded from managing).
- However receiving a minimal number of patients should not exclude the completion of this.
- I.E., if a ward only admits a very small number of brain injured patients per year, but is the designated area for this injury type, then the module should still be completed.

- East ward teams would need to complete all 13 compulsory modules and the Musculoskeletal, thoracic, spinal, non-invasive and tracheostomy modules
- West ward would need to complete all 13 compulsory modules and thoracic and abdominal modules
- South ward would need to complete all 13 compulsory modules and spinal and traumatic brain injury modules.
- North ward would need to complete all 13 compulsory modules and spinal, abdominal, max fax and ocular, and non-invasive ventilation modules.
- Central ward, which is an elective orthopaedic unit and do NOT admit trauma, do not have to complete any

	Admitting ward	Admitting ward	Admitting ward
Musculoskeletal injuries	East ward		
Thoracic injuries	East ward	West ward	
Spinal injuries	South ward	East ward	North ward
Traumatic Brain Injury	South ward		
Abdominal Trauma	North Ward	West ward	
Max Fax and ocular trauma	North Ward		
Non-invasive ventilation	East ward	North ward	
Tracheostomy	East ward		

Step 3 – Maintain local training records

- Each ward is responsible for keeping a local training log. The log should identify and report on each qualified nurse within the ward environment.
- Please see the networks competency assessment document for advice on who is eligible to sign off competencies.
- Each staff member and their ward manager should keep copies of their assessment documentation in their personal file, and this may be requested as part of the peer review process.
- This can also be used for things like revalidation!

Step 3 – Maintain local training records

East ward teams would need to complete all 13 compulsory modules and the Musculoskeletal, thoracic, spinal, non-invasive and tracheostomy modules

TU: St Elsewhere Hospital Ward: East Ward																						
	Compulsory Modules											Additional modules (area specific)							tion			
	Organisational aspect	Airway and Breathing	Circulation Management	Haemorrhage Management	Disability	Exposure and Temperature control	Pain assessment and management	The pregnant Trauma patient	The bariatric trauma patient	Challenging behaviour in the trauma patient	Wound care	Psychological impact of trauma	The older (elderly) trauma patient	Management of traumatic brain injury	Management of maxillofacial, cranial and ocular trauma	ic injui	Spinal column and spinal cord injury	Abdominal trauma	Musculoskeletal injuries	Non-invasive ventilation	Tracheostomy care	Date of competency completion
